Dear

Mr. Kast

I'm writting about my model 700 7m.m. Mag. I sent it to yall a few months ago because it went off with me while I was hunting shooting down the stand row nearly killing a friend of mine. I had shot a deer and killed him when I bolted the Rifle I had it laying on my lap & it when off yall said the Rifle was full of Rust & paint yall put a new trigger assem polished the Chamber & tested it then said it was fixed. When I got it back I tried it & it worked fine. I put it in the gun cabinet & never shot it. A few days ago I took it out & was going to put my scope on when I bolted it to see if it was loaded & when I fired it it smoked & when you put the safety on you it can still fire it would run around if a month had put a bullet in it & it would have killed some one. This is the same thing has happend twice next time I will throw it away
