

Dear Mr. St. John,

As per phone conversation, here is a description of the problems and other work to be done. One problem is with the gun going off when the safety was put in the fire position to open the bolt to get the round out of the chamber. The trigger was not touched. Another problem is with the magazine. Two shells pop up when the bolt is opened instead of just one.

Please change the safety to a without bolt lock type and check and reset (if necessary) the trigger pull just to a standard pull.

Thank you for your cooperation and time.

Thank you,
