2-19-91

Dear Sir,

I am returning this rifle to be checked. Customer says it will fire with out touching the trigger. I did not take it apart as I know you want to look at it before anything is done. The first time it happened, some time ago, he thought he may have touched the trigger. In the 90 season his other Remington rifle didn't work so he took this one again. When he closed the bolt while removing shells it fired. This time it shot a hole in a car.

Please check over + repair.

Thank you
William Ripley

Remington - 700 A D L - .270 cal.
