Iliom, New York 13357

Dear Mr. Steckl,

Enclosed is a packet of copies of letters I sent to you back in 1990 regarding a Remington 22-250 gun which misfired when the safety was turned into the fire position. If you review them, you will see that another hunter was seriously injured in that accident.

Since that time, we sent this gun to a highly reputable gun service. The results of his summary are in the packet. He thought it was something to do with a defective sear. He fixed the gun. I took it out in 1992, fired it twice without any problem, cleaned it, and then in 1993 took it back for the hunting trip. This time, while in the stand getting ready to take a bead on a deer, as the gun was up in the air, I flipped the safety forward to get ready to fire, and it discharged into the air by itself again. This gun has already seriously hurt one person, and it has the potential to do so again. I am not satisfied with it being fixed any further. I think this whole mechanism should be scrapped. I am hearing from other people now that perhaps this particular model had to be recalled for this problem. I knew nothing about that. I have had at least five lawyers from out of state call me wanting to take a case against Remington Arms on behalf of the man that was hurt and myself, and we have turned them all back. I would be happy to send this gun to you, but if I do so and you agree with the content of this letter, then my wishes in this matter are as follows: I want the firing mechanism parts of this gun to be scrapped. The stock and barrel are salvagable. I want the gun to either be rebuilt into a safe gun with an entire new firing mechanism of a modified type (if this has been recalled in the past) or simply give me a voucher and I will get away from this gun altogether and use the voucher towards a purchase of a different model. I don't want the mechanism fixed and sent back.

Please discuss this and call me at (817) 723-8843 during

Please discuss this and call me at (817) 723-8843 during business hours or notify me by letter.

Sincerely,

A handwritten signature in cursive script, appearing to read "D. Borman".

David G. Borman, M.D.
