

3-30-03

Hello Remington Arms,

AV = 3/7/

I am sending you my rifle for examination. It is firing when I bolt in a shell This is occurring only when the temperature gets below 15 - 20* . If it bolts in, the trigger does not pull. Then on its own it will fire. (hang fire?).

Please look over completely and repair.

If you have any questions call (732) 681-7300 day (732) 922-8211 nite.

*Could not duplicate, Saw sticks,
due to sticky residue build-up.
Install new T&A, clean action
#20.
Under Bolt lock
Modification program.*

Thank You,
Robert H. Beeler

Quote customer.
