

To: Remington Fire Arms Co.

I am sending you this gun for repair. Since I bought the gun, the safety has not worked properly, and has become worse, over the years.

The gun has been very dependable except for when you bolt the gun and set the safety; Then when you check the safety by pulling the trigger it holds, then release the safety and the gun fires.

I have had the gun to numerous Remington dealers to have the gun fixed, but have had no results.

I feel that some of the dealers I had my gun to has damaged the adjustments on the trigger, so I would like the gun to be checked thoroughly and the trigger to be set light, and also I would like new screws to be replaced in base plate of mounts. If all possible I would like to receive the gun back in the quickest way possible, so I can hunt this year.

Thank You
