Dear Sirs:

As advised by your company, I'm returning my rifle for repair. The Model # is 722 and the serial # is 249357. The trouble seems to be in the trigger mechanism. The rifle fires prematurely on the down stroke of the bolt handle. I purchased the gun at Gun Show, so I have no idea who the previous owner was, or whether the trigger was tampered with or not. There is a safety factor here that needs corrected, and I feel confident your skilled staff can correct this situation. Thank you

Sincerely: Mike Vrabel
