Remington Corp.

To Whom it may concern,

I received the box you sent me to send my Model 788, Remington 22-250 back to you to be fixed, so here it is.

As I told you, I took the gun out hunting and when the trigger was pulled to fire the gun it didn't fire, I was takeing the gun off my shoulder to check what the problem was with the gun, WHEN the gun went off by it's self. There could have been a serious accident at that point, Thank God there wasn't. I don't know what the problem was But i'm sure its the trigger mechanism? I have other Remington rifle's and have had no problems with them.

Thank You,
Vernon D. VandeBrake
