RE: Case #2426

Dear Mr. Kumm,

We were sorry to learn about the unfortunate incident you experienced with your Model 700. As I understand it, the rifle fired when you closed the bolt. We are certainly glad that no one was injured, and that you are anxious to get back to enjoying the shooting sports.

As we discussed, I have enclosed a prepaid UPS shipping label for you to ship the firearm back to our factory for examination. I have also included a copy of this letter to put inside the shipping box. The letter inside is important as sometimes the outside label gets damaged in transit and we want to be sure the firearm is logged in correctly. On the factory repair form, please provide additional information about the incident, including the date of the last occurrence, type of weather, type of ammunition being used, etc.

We apologize for the inconvenience that this incident has caused and we hope that our actions will keep you as a loyal Remington customer.

Sincerely,

Laura Watson

I was firing my new Remington 300, last week, and when I chambered my 3rd round, it fired as soon as the bolt was locked forward. what do i need to do so this doesn't happen again? Has there been any recalls for this? p.s, I've been in the US military for over 20 years, so I have been around guns and I use them Safely.
