March 25, 1999

Remington Arm Company Attn: Dennis Sanita 14 Hoefler Ave Ilion, NY 13357

Dear Dennis:

Enclosed is my Remington Model 700 BDL serial number 6507624.

This is the rifle I spoke of during our phone call the week of march 16th. The rifle has been in my possession since new in 1972.

I experience a discharge while closing the bolt about 1974 and assumed my finger was on the trigger. (I'm a lefty shooter) The rifle repeated the discharge upon bolt closing again in about 6 months (EST 200 rounds), and this time I knew the rifle was the problem. I had the local smith check it out. He adjusted the trigger pull but found no problem with the rifle. He function tested it and told me it was fine.

I used the rifle for about a year without another problem. (another 200-300 rounds). The rifle was inactive for several year while I was stationed overseas etc. and was used again briefly in 1987. The discharge problem reoccurred and I stopped using the rifle. (lack of time due to work etc..)

I am now going to restart shooting this rifle. While cleaning the rifle in preparation for the range (it was oiled etc. for storage) I once again experience dry fire on closing the bolt. (finger not anywhere near the trigger).

Please evaluate this problem and do what is necessary to repair the rifle. I am very concerned that the intermittent nature of this problem will allow the rifle to "pass" routine functional test. Please consider this when you decide what repairs are needed.

I have packaged (double boxed) the rifle in the boxes I order from your parts department and am shipping it to you via UPS. Please advise me concerning the repair action, charges and repair time as soon as possible.

Sincerely,

Kenneth W. Morris

Enneth Mor
