TO: H. J. Hackman  
FROM: M. H. Walker  
SUBJECT: MODEL 40-X MANUFACTURE AND ASSEMBLY

The following is a list of the critical operations on the M/40-X as now visualized, per request of PE&C.

Barrel

Blank Straightening - .020 Max. indicator  
Drilling - .050 Max. indicator on hole run out  
Reaming - Finish at least equal to M/37  
Rifling - good control on lubrication and size  
Leading - finish and uniformity  
Turning - control of concentricity and size  
Chambering & cut-off & crown  
Browning - prevention of pitting in bore from Browning acid

Receiver

Turning, boring, and threading - concentricity and alignment of  
bolt hole and barrel threads with O.D.  
Locking recess - squareness, finish, and location  
Drilling and tapping of Guard Screw holes and Sight holes - location  
and alignment

Stock

Inletting of Barrel & Receiver

Alignment of barrel and receiver grooves  
Finish and size of receiver grooves  
Alignment and location of Guard Screw holes  
Location and alignment of recoil shoulder
