Model 700 Trigger Housing Assembly (Riveted)

We have designed a new sear spring, SK A-1950, that will allow a smaller hole to be drilled in the spacer for the spring seat. This should prevent separation of the spacer as previously encountered on drawing C-26655.

In the case of the collapsing of the rear spacer under riveting pressure, this has been covered with John Marley and he would like to look at the present design again before making changes we have discussed. The changes we covered should have no effect on manufacturing costs.

We would like to have this assembly put back on your agenda. We have enclosed prints for the complete trigger assembly.
