

High Energy Beam Applications

Two designs of the Ducks Unlimited emblem, laser carved in stocks were received from Lasermation. Stocks were finished and forwarded to Marketing for evaluation.

Lasermation will proceed with two stock grip area designs. They can not carve full fore end radius with the current tooling. Some fore end designs will be narrowed and others reduced by approximately 70% for sample preparation. Lasermation claims they will be able to handle the full

fore end radius with an investment
of \$10 to 20M for tooling and 6 months
of development time.

Free machining steel samples were
forwarded to ~~the~~ EDL for welding
conditions scouting. Preliminary
First results
are expected in March 1980.
