Re: Item 19 on attached cost estimate, per discussion with TR Andrews.

1. The estimate does not consider the use of the cheaper blank, because Process Engineering does not consider it a feasible alternative. If feasible, could reduce cost by \$2.50 or so.
2. The estimate does not consider the use of the Zuckermann Carver or Opti-Sander.
 - Carver - excluded to expedite the estimate - standards would have to be generated - might reduce cost by \$1.00.
 - Opti-Sander - not requested by CBW. Might reduce cost by \$1.50

I will talk to Jerry Hill next week about resolving #1 above.

I will then ask IE to reconsider the estimate, considering 1 & 2.
