

DRP TEST

Three of the M/700 design change fire controls (2 with 10,000 dry cycles and 500 live rounds, one as received from design) and one current production M/700 fire control were assembled in M/700 30.06 cal actions and a drop test was conducted.

Each of the rifles were dropped from 4 feet onto a solid neoprene rubber mat, and from 2 feet onto a solid maple plank.

- At each distance the rifle were dropped in four different positions:
 - a) ~~side~~ face
 - b) ~~back~~ face
 - c) ~~top~~ face
 - d) ~~bottom~~ face
- The safety was closed on a copper washer placed in a holder in the chamber.
- The safety was in the "on" position in the 4 foot drops, and in the "off" position in the two foot drops.

TEST RESULTS

- The position of the safety was not affected by the drop.
- The rifle did not fire during the test.
- The copper washer was not damaged during the test.
- There was no difference noticed in the results of this test between the new design and the ~~current~~ design fire controls.
