

This is the proposed wording for the hang tag that will go on the M/1100 Steel Shot retrofit barrel.

Model 1100 12Ga Steel Shot Only Barrel

- * This barrel/choke tube system has been optimized for performance and reliability with ALL sizes of steel shot.
- * ONLY steel shot ammunition should be used in this barrel.
- * The choke tube in this barrel is made from a special alloy steel and heat treated to provide maximum strength. It will provide patterns averaging approximately 80%, using Remington STL12SMAG-2 ammunition. If a less dense pattern is desired (approximately 70%), a standard Remington stainless steel Improved Cylinder choke tube may be used. Remington does NOT recommend using our standard stainless steel Full choke tube with shot sizes of BB and larger.
- * For additional information on steel shot ammunition and hunting with steel shot please refer to Remington's "Shooting Steel Shot With Confidence" brochure.
