

Muzzle Break

- o It is recommended that a muzzle break be offered as standard equipment with this product. This will further differentiate our offering from competition, while positioning Remington as an industry leader by advancing new equipment to enhance product performance.
  
- o Suggest as an initial alternative that muzzle breaks be sourced from P&K prior to turning. Installation and finishing of brakes would be done by Remington. It is desirable to maintain the standard barrel contour throughout the muzzle break area.

Calibers:

7mm Mag.	30-06
300 Win. Mag.	280 Rem.
338 Win. Mag.	270 Win.

Note: Please see attached project sheets for volumes by caliber.

SPECIAL NOTE:

\*\* Current plans include dropping the 700 AS which will be replaced by the aforementioned product. All efforts should be made to reduce inventories to exhausted levels by year end. This probably includes pruning planned production to achieve the desired end result.
