

**MODEL 700 STAINLESS STEEL, DESIGN ACCEPTANCE**

**TO: J.R. Snedeker**  
**FROM: D.R. Thomas**

**INTRODUCTION:**

On February 17, 1992 the test lab received a ten gun sample of each of the magnum caliber M/700 Stainless Steel rifles. The design acceptance evaluation, consisting of measurements, accuracy, function/endurance, strength, and S.A.A.M.I. drop was performed on each of the four magnum calibers. In late April the test lab received a ten gun sample for each of the smaller caliber rifles. Again, all of the above tests were conducted on rifles of each caliber.

**SCOPE OF THE TEST:**

To thoroughly evaluate the design of the M/700 Stainless Steel rifle.
