CHANGE IN ORGANIZATION TECHNICAL DEPARTMENT

Effective immediately, H. J. Hackman, formerly Project Engineer on Center Fire Rifles, is appointed Superintendent--Engineering Section, Arms Division. reporting to S. M. Alvis, Assistant Manager, Arms Division.

The Engineering Section is composed of the Specifications Unit, the Product Engineering Unit and the Tool Design Unit. The Superintendent--Engineering Section, therefore, will assume the responsibility for the activities of these units and the respective unit Supervisors are henceforth directly responsible to him.

CHANGE IN ORGANIZATION
TECHNICAL DEPARTMENT

Effective August 1, 1947, H. J. Hackman, formerly Superintendent - Engineering Section, Arms Technical Division, is transferred to the Plant. The position of Superintendent - Engineering Section, Arms Technical Division is discontinued.

William K. Retzloff, formerly Tool Design Engineer, duPont Engineering Department, is appointed Supervisor - Product Engineering, reporting to S.M.Alvis, Assistant Manager. Supervision in Process Engineering and in Tool Design previously reporting to H. J. Hackman will report to William K. Retzloff.

R. H. Grace - Supervisor - Specifications Unit will report to S.M.Alvis, Assistant Manager.

E. K. Wheat - Engineer - Process Development will report to S. M. Alvis, Assistant Manager.

D. S. Foote, Engineer - Product Development will report to S. M. Alvis, Assistant Manager.

H. A. Brown,
Manager, Arms Division
Technical Department

ANNOUNCEMENT

CHANGE IN ORDANIZATION
TECHNICAL DEPARTMENT

Effective April 1, 1948, the Product Engineering Unit on New Arms designs in the Ilion Technical Division is transferred to the Product Engineering and Control Section of the Ilion Plant under the supervision of H. J. Hackman, Superintendent. W. K. Retzloff, Supervisor of this unit, formerly reporting to S. M. Alvis will report to H. J. Hackman.

Effective April 1, 1948, H. D. Herbert, formerly assigned to the Product Engineering Unit reporting to W. K. Retzloff, is transferred to Process Development Engineering, reporting to S. M. Alvis. He will continue with engineering assistance on the Model 514 until the Project is completed.

H. K. Faulkner, Manager
Ilion Works

H. A. Brown, Manager

COPY OF LETTER TO JOBBERS

Gentlemen:

The following changes in our headquarters sales organization became effective as of September 1, 1948:

A new division of the Sales Department has been established to be known as Products Sales Division.

G. E. Pinckney, Manager, Firearms Sales has been appointed Manager, Products Sales Division reporting to R. H. Coleman, Assistant Director of Sales.

The Products Sales Division includes the following sections:

Remington Ammunition, Trap & Target Sales - R. C. Swan, Manager

Peters Ammunition Sales - G. C. Lambert, Manager

Firearms Sales - C. W. Roney, Manager, succeeding G. E. Pinckney

Orders - G. A. Schneider, Manager

Products Service - A. L. French, Manager

Forecasts - C. E. Flanagan, Co-ordinator

C. B. Wells, an Assistant Director of Sales of the Remington Arms Company, Inc. for many years, retired as of August 31, 1948, under the Company's Pension and Retirement Plan.

For your information and guidance, we are attaching a copy of the Sales Department Organization Chart, incorporating the above changes.

TO: A. S. Jess

FROM: G. W. Radley

SUBJECT: CHANGES IN DEPARTMENT NUMBERS

The following changes in Department Numbers will be made effective January 2, 1950:

	Present No.	New No.
Works Engineering Section		
Yard	94	24
Service Section		
Salvage	35	46
Stores-General	92	47
Prod. Eng. & Control Section		
Process Engineering (New Arms)	98	83
Inspection Supervision	41	87

Changes in employee clock numbers will be made accordingly by the Personnel Department.

Please change our records accordingly - especially the personnel record Book so we make a note for record purposes when changed and old number

G W Radley
Works Accountant

CHANGES IN ORGANIZATION
RESEARCH AND DEVELOPMENT DEPARTMENT

The following changes are effective June 1, 1955:

P. H. Burdett, Manager, Ammunition Division, is appointed Assistant to the Director of Research and Development.

Paul Hickman, Manager, Industrial Sales Division, Sales Department, is appointed Manager, Development Division, reporting to the Director of Research and Development.

R. E. Evans, Manager, Pioneering Research Division, is appointed Manager, Bridgeport Research Division, reporting to the Director of Research and Development.

S. M. Alvis, Manager, Arms Division, is appointed Manager, Ilion Research Division, reporting to the Director of Research and Development.

R. T. Catlin, Manager, Industrial Division, is appointed Manager, Engineering Development Division, reporting to the Director of Research and Development.

F. B. Clay, Supervisor, Metallurgical and Mechanical Unit, is appointed Supervisor, Ammunition Research Section, reporting to R. E. Evans.

B. K. Daubenspeck will continue as Supervisor, Chemical Unit, Ammunition Research Section, reporting to F. B. Clay.

R. H. Vandenberg is appointed Supervisor, Metallurgical and Mechanical Unit, reporting to F. B. Clay.

G. R. Eckstein, Research Associate in Mechanical Engineering, will report to F. B. Clay.

P. R. Haskell, Supervisor of Design, Pioneering Research Division, is appointed Supervisor, Industrial Research Section, reporting to R. E. Evans.

C. S. Cummings, Supervisor, Physics and Ballistics Unit, is appointed Supervisor, Fundamental Research Section, reporting to R. E. Evans.

R2541915

Announcement
Changes in Organization
Research and Development Department

Effective June 1, 1955:

W. E. Leek, Supervisor, Design Unit, Arms Division, is appointed Supervisor, Arms Design Section, reporting to S. M. Alvis.

E. K. Wheat, Supervisor, Engineering Unit, Arms Division, is appointed Supervisor, Process Research Section, reporting to S. M. Alvis.

M. H. Walker is appointed Supervisor, Industrial Design Section, reporting to S. M. Alvis.

G. M. Calhoun
Director of Research and Development

TO: A. S. Jess

FROM: G. W. Radley

SUBJECT: NEW DEPARTMENTS

The following new departments are being activated:

Production Section

Department 78 - Machining (M/81-141-31) Effective December 20, 1948
Foreman - E. E. Christy
Supervisor - G. A. Choules

Prod. Eng. & Control Section

Department 41 - Inspection Supervision Effective January 3, 1949
Chief Supervisor - W. A. Best
Superintendent - H. J. Hackman

G. W. Radley
Works Accountant

Proposed Organization

New Firearms Product and Process Development — T. L. Cagle III

Senior Consultant for Advanced Manufacturing Technology - R. B. Hadley

Process Development — Senior Supervisor - J. W. Bower

- K. C. Rowland
- R. J. Belaska
- J. N. Lawrence
- E. Owens (+ ESD Engineer)
- R. J. Sanzo
  - E. L. Sanders, E. D. Rankins, W. M. Curry, G. Smithson

New Firearms Design - Shotguns — Manager — J. S. Martin (XSE, XPO, HPX, Expendable Case)

- A. A. Hujick
- J. C. Bauman
- K. L. Calkins
- J. P. Powers
- E. W. Yetter, Jr.
- M. F. Carter
- J. L. Kast

New Firearms Design — Rifles — Senior Supervisor —

- S. A. Fanelli
- D. S. Findlay
- A. R. Eddy
- F. E. Martin
- (M/[illegible]/1000, M/100, M/70, M/D, Common Receiver, Scope Mounts/Rings)

Powder Metallurgy and Materials Research — Senior Supervisor —

M I S S I O N

The mission of the Firearms Research Division is threefold:

- Develop new firearms products in three basic classifications of shotguns, centerfire rifles and rimfire rifles.

- Upgrade and provide design support for our current products.

- Develop advanced processes and production systems for optimum cost effectiveness.

FIREARMS RESEARCH DIVISION

1981 BUDGET

I E B RESEARCH

Strategic Research	Incentive
• Develop a new "family" of pump and autoloading shotguns for introduction in 1986.	$1MM annual cost savings. Increase market share 2-4%. Increase annual sales $6MM, over the period 1986-1988.
Tactical Research	
• Improve styling and performance features of current models.	Improve safety, reduce product liability risk. Maintain competitive position. Increased 5 year pretax earnings of $2.0MM.
• Develop special models. Add-use existing model components (competition trap, bolt action carbine.)	Increase 5 year pretax earnings $8MM. Additional earnings opportunities under study.
• Reduce cost of current models.	$750M annual cost savings. Additional savings opportunities under study.
• Develop new process technology for cost reduction, facilities modernization and upgrading.	$2MM annual cost savings beginning in 1986. Short term cost savings potential of $130M.

SUMMARY

	Exempt Salary	$M

R2542024

M I S S I O N

The mission of the New Product Development and Process & Materials Research groups is to provide product designs and processes that will improve Remington's competitive position in the firearms market. New designs must maintain the quality standards associated with the current product line while offering improved function, reliability, and cost. Satisfaction of these goals requires a knowledge of the functional features of both Remington and competitive firearms designs, continual search for improved designs, and an awareness of the impact of processes on product cost and reliability. Cooperative interaction between design and process personnel offers the opportunity for advanced analysis of process requirements and investments resulting in design optimization. Support of this effort requires an understanding of both existing and advanced process technology. Satisfaction of goals to improve productivity, reliability and cost of firearms production centers on programs to reduce manpower requirements, reduce scrap and reject rates, and increase machine flexibility.

Joe Glass

Steve Rust
C 5/13/81

Remington Arms research is an organization of 106 people, 64 exempt and 42 nonexempt, (CHART I) Our 1981 operating budget for IEB research is $6.4M which is 2.0% of the 1981 1A forecast sales. The ammunition research program is supported by a team of 7 Engineering Department roll engineers on field assignment in Bridgeport. Their mission is the design and development of high productivity machines to produce ammunition components when commercial equipment is either not suitable, or not available. Our ammunition research team is also located at Bridgeport. The Firearms and Powder Metal research people are located at Ilion.

CHART II. The principal mission of ammunition research is to provide the technical base for significant cost reduction and quality improvement in the manufacturing operations. Emphasis is placed on the development of improved processes and associated equipment to reduce labor content and improve machine efficiency and productivity. A new process for producing HDPE shotshell bodies is our single largest effort, currently involving 7 exempt research people, including 3 EDL people working on prototype machine pre-start up, check out, and debugging.

Ammunition product development work involves new designs ~~changes~~ to reduce cost and/or improve quality, as well as new products which normally add-use major components of the current product line, and process.

R2542026

The principal mission of firearms research has been to develop new products to increase sales, and to upgrade the design of current products to improve safety, reduce cost, and improve our competitive position. Within the last two years we have formed a process development research group whose mission is to find lower cost manufacturing technology for firearms parts. We plan to expand this effort.

I'm goint to elaborate on selected research programs with a few examples, while introducing you to the Remington product line, beginning with firearms.

SLIDES The newest of our major products is the family of slide action center fire rifles introduced last December. The term family refers to a line of products which shares a large number of common features and parts - a significant cost consideration.

SLIDES The new Models 7400 (SLIDE 1) and its deluxe companion the Model 4 Autoloaders, and the M7600 (SLIDE 2) and its deluxe companion the Model 6 pump action rifles replace the Models 742 (SLIDE 3) and 760 (SLIDE 4) which were introduced 20 and 30 years ago, respectively. These models enjoy high market shares.

This new line is the successful result of a research program launched some five years ago. The new Models feature smoother and stronger actions, and improved durability and reliability. The deluxe versions feature improved appearance.

SLIDE 5

The Model 700 bolt action rifle introduced in 1962 and the Model 788 introduced in 1967 and restyled in 1980 round out the center fire line. The Model 700 is the strongest and most accurate production class bolt action rifle. The Model 788 is a rugged, inexpensive and accurate gun.

SLIDE 7 SLIDE 8

The Models 870 pump introduced in 1950 and 1100 auto-loading shotgun introduced in 1963 are the most popular repeater shotguns in the market place. However, this family design is nearing the end of its product life cycle, evidenced by a decline in the rate of growth, and competition from good quality Japanese guns. BLANK SLIDE We are planning for the next generation shotgun family and are supporting the plan with the single largest Remington research project. Our objective is a lighter weight, lower cost, and more reliable and durable shotgun family. The objective is a particularly challenging one in view of the high quality and strong ~~quality~~ reputation of this family of guns. Prototypes meeting the weight objective are now in test. In the new design we have reduced the number of parts by 26%, and increased the number of common parts between the pump and autoloader. Thus we expect a cost reduction of about $10.00 per gun, or about 6% of current factory cost. We are aiming for ~~a 1986 Model year~~ introduction of the new line.

Within the current product line there is opportunity for product innovation. During the last year we have introduced two new shotguns which add use features of the Models 870 and 1100.

R2542028

SLIDE 10

The Model 870 Competition trap is a high grade, single action shotgun designed for competitive trap shooting. The gun features a unique, gas operated, recoil reduction system built into the magazine tube of the Model 870, high grade wood, and a special rib. This gun retails for about $550. The gun has been very well received in its early introduction phase.

SLIDE 11

The Model 1100 L.E. is a collector's grade gun, limited to 3000 units which features a chemically etched receiver with gold plating, highly polished metal surfaces, and high grade wood with a rosewood grip cap. This gun retails for about $1100, and was also very well received. We plan a series of collectors' guns timed approximately with the 75th anniversary of the first Remington model of its type. The next two planned will be the Model 4 auto for rifle for introduction in 1982, and the Model 870 pump shotgun the following year.

SLIDE 12

The Model 3200, introduced in 1963, is a high grade over-and-under, break action shotgun. Its appeal is limited to a small segment of competitive skeet and trap shooters. In 1979, we introduced a special four barrel set for skeet shooters. Currently, no research support is planned for this product line.

BLANK

Our rimfire product line competes in the middle to high priced segments of the marketplace. We see very little opportunity for payoffs from product or process innovation in support of this product line, and no research support is planned.

SLIDE 13

The rimfire firearms products consist of

1) The N-66, introduced in 1959 - an autoloading rifle with a Nylon 66 stock which is guaranteed for a lifetime;

2) A product family, the Models 552 autoloader and 572 pump, introduced in 1955; and

3) A line of bolt action rifles noted for excellent accuracy.

BLANK - Board.

The ammunition line consists of a virtually complete line of shotshells, rimfire and centerfire ammunition.

The shotshell line is highly competitive with three major producers competing with approximately equal market shares. Our business goal is to significantly improve our cost performance. The principal mission of ammunition research is to provide the technical basis for improving the productivity of the process equipment. Currently, our first priority is the successful start up of a new process for producing the plastic shotshell unibodies. SLIDE 15 The first production prototype is now sitting on the floor at EDL for check out and debugging of the programmable computer control system. SLIDE 16 We are aiming for a 4Q start up of the first machine. Indicated savings are ≥ $1M when implemented across the board at both plants. Indicated NROI is 20%. The new process is expected to reduce scrap, maintenance and labor. The three new machine systems will replace 35 current machines. Better quality is expected.

BLANK SLIDE

Our second priority is a new process for producing shotshell primer components. We are starting up a new process at Lonoke which produces a primer component called an integral anvil battery cup. This new part replaces labor intensive operations involving production and assembly of two parts. Superior quality in terms of reliability; that is, misfires, is expected. The equipment is operating well. We plan to introduce this new, lower cost part in the 3Q.

Our third priority involves the modernization of the shotshell assembly and loading operations to reduce labor, improve machine efficiency and improve product quality.

The EDL machine development group has just launched the development of the prototype assembly machines. The Lonoke plant is operating a new state-of-the-art high speed load and pack machine.

Centerfire

OF = 85
17.2 5%

We have a strong competitive position in the centerfire sporting ammunition line with an approximately 50% market position. We are the low cost domestic producer. We have new opportunity to improve our cost position with capital improvements which would modernize the production process. SLIDE 17 The research mission is to provide the technical base for the modernization with the successful demonstration of 5 prototype machines being developed under an ~~improved~~ approved Part I project. This work will be completed near the end of this year.

RL:17

The rimfire line is another highly price-competitive line. We are the low cost producer with a +40% market share. Our highly automated process, now about 30 years old, operates at about twice the piece rate of the highest speed commercially available equipment. However, there are a number of producers, including relative newcomers, seeking market share, so we are operating at 70% of installed capacity. We are treating this line as a cash generator. There has been a modest opportunity for product innovation with products like the Yellow Jacket and a soon to be announced Scorpion. These are high performance products which justify a premium price in the marketplace and can be made at low cost on our high productivity equipment.

Clark Workman
6/8/91
(Presentation to
Bob Franey)

Good Afternoon,

Several weeks ago Joe Glas gave you a presentation on Remington Research activities. At that time he reviewed our basic mission, introduced you to our product line and briefly commented on how our manpower is assigned to IEB Research.

The display boards to my left contain samples of our most recently announced products and several of the new products that are in various stages of development. I will be happy to try to answer any questions you have concerning these models.

Today, our primary objectives are to make you more familiar with our organization, highlight some of our major projects and take you on a tour of our support facilities.

The Firearms Research Division is divided into four operating sections:

1. Project Control and Administrative Services
2. Research Laboratory
2. Current products
   and
4. New Products and Processes

I will cover the first three sections and Tami Capeletti will discuss New Products and Processes. I will then briefly describe our planned tour and tell you what you will see in the various sections.

Project Control and Administrative Services includes four different groups,

1. Project Control
2. Research Model Shop
3. Research Computer
4. Technical Writers

Project Control is responsible for preparation of the budget, construction forecasts, development schedules and preparation of projects. Guidance for control of expenditures is also provided. The group consists of the Project Control Supervisor and one clerk.

The Research Model Shop is committed to building all of the New Project prototypes and supplying tool making support to the New Processes Group. Personnel include a foreman, 10 model makers and a tool crib attendant.

The Computer Section is manned by two Technical Development Programmers and a Computer Operator. This group provides programming services for all of the other Research Departments ranging from scheduling to computer aided design development.

The Technical Writers are responsible for preparation of Owner's Manuals and Field Service Manuals as well as the maintenance of drawing files and parts lists. The group is composed of one Technical Writer, one Draftsman, and one clerk.

The Research Laboratory is supervised by Jim Snedeker, and is staffed by two Foremen, three Engineers and five technicians. This section provides a wide range of diverse support activity that can be categorized under one of seven headings:

1. Test and evaluate new Remington gun designs and design changes to current products.
2. Evaluate competitive products.

3. Provide technical assistance to the Plant in resolving quality control and production problems.
4. Assist Bridgeport and Lonoke with ammunition evaluation and testing.
5. Assist the Legal Department in preparation for court cases.
6. Support SAAMI.
7. Provide still and high speed motion picture photography for the Plant and Research.

The Current Products Section is supervised by John Brooks and is staffed with two Engineers and two Designers. This group is charged with twofold responsibility.

1. Provide immediate technical assistance to Production, Marketing and the Legal Department on any program involving our current product line.
2. Implement product development programs that involve short range modifications or design revisions to our current products. The Competition Trap gun and the Light Weight Bolt Action Rifle on the display rack are samples of this work.

That covers everyone except the New Products and Processes Section. Tami Capeletti will discuss their mission and highlight a couple of their major programs.

① 6/9/81
Presentation to
Bob Forney

① Briefly review Research programs involving new products and processes.
Start with an overview of personnel and programs in the NPD & AR Groups.
Then cover in more detail two of our major new programs
- New generation shotguns
- New venture in injection molding

R2542038

(2) NPD Group

Challenge is to maintain the quality standards associated with our current product line, while developing new lines offering improved function, reliability, and cost.

An integral part of the design process is an awareness of process requirements and alternatives. This is

facilitated by direct interaction with the Process Research Group.

(3) PR Group

We are fortunate to have the services of Ray Hurley as Senior Consultant for Advanced Manufacturing Technology. Ray reports to me. He has 40 years of experience at Remington and provides

valuable input on process needs and programs to satisfy those needs.

PR Group includes Research H/C Shop.

Group has 10 active programs with a total projected cost or earnings improvement of $7 MM.

(5)

(4) KSG/KPG Program
- First major program to review in detail
  - design of new generation shotguns

(5) Objectives
- 7¼ lb field grade 12 Ga autoloader
- 70% commonality
- No adjustments + increased durability
- 24% reduction in parts

⑥

- $10/gun cost improvement
- Improvements to locking, feeding, and gas systems

⑥ XSG/XPG Schedule
- Have 4 Research Models in test for Design Verification

(7) Parmatech Process

- Advantages - Capable of producing inexpensive components with complex shapes impossible to form with conventional P/M techniques and expensive to machine. Resultant components feature good dimensional control due to controllable shrinkage to within ± 0.001" combined with high strength and good surface

finish due to sintered densities approaching 99 % of theoretical density.

45 MM/year may be a conservative estimate. In an article reprinted in the February 16th issue of Business Week, the potential for injection molded components was estimated to be as high as $1 Billion by 1987!

R2542045

(9)

ce This is a large growth area. Briefly review procedure to highlight Research opportunities.

(P) As a result of the growth potential and the increased competition which will develop with the market, a continuing Research effort will be required.

R2542046

(9) Marketing will be a key element in success of this venture, therefore the organization must include a Marketing Specialist —

(10) In closing, Dr. Glas has proposed a two phase strategy covering the next two years with Phase I aimed at providing Research Semiconductor Facilities to accomplish

the necessary technology transfer from Remington to Remington.
Phase II will provide initial production capacity.

A formal proposal for Remington to acquire this injection molding technology has been submitted to the Executive Committee for approval.

FIREARMS RESEARCH - NEW PRODUCTS AND PROCESSES

Outline:

- New Product Development
- Process Research
- XSG/XPG Design
- Parmatech Process

NEW PRODUCT DEVELOPMENT GROUP

- Supervisor - James S. Martin
- Personnel - 6 Engineers
  4 Engineering Assistants
- Mission - Develop new products to improve Remington's competitive market position
- Programs
  - M/7400/7600 Centerfire Rifles
  - New Generation Shotguns (XSG/XPG)
  - Improved Styling & Features in Bolt Action Rifles

PROCESS RESEARCH GROUP

- Senior Consultant - Raymond B. Hurley
- Supervisor - James W. Bower
- Personnel
  - 1 Supervisor (N/C Process Development
  - 8 Engineers - N/C Programmers
  - 2 Engineering Assistants
  - 1 Machine Setter
- Mission - Develop processes to improve product reliability and cost
- Programs
  - Deformation Processes
  - Finishing
  - Assembly
  - Material Handling
  - Material Applications

NEW GENERATION SHOTGUNS (XSG/XPG PROGRAM)

- Objective - Replacement for current line (M/870/1100)
- Introduction - 1986
- Cost Improvement - $10/gun
- Projected Volume - 500,000/year
- Capital Investment - $11MM
- Net ROI - 22%

NEW GENERATION SHOTGUNS - DESIGN OBJECTIVES

- Weight Reduction
- Maximum Commonality
- No Adjustment for Magnums
- Reduced Components and Cost
- Improved Performance

NEW GENERATION SHOTGUNS - DEVELOPMENT SCHEDULE

- Preliminary Design - July 1981
- Market Field Test - October 1981
- Project Economics - December 1981
- Product Acceptance - December 1981
- Project Authorization - March 1982
- Trial and Pilot Work - June 1985
- Warehouse - October 1985
- Announcement - December 1985

NEW GENERATION SHOTGUNS - SUMMARY

- Preliminary Design Complete
  - — All major design objectives satisfied
- Design verification tests in progress
- Preliminary economics indicate 22% Net ROI
- Introduction planned for 1986

INJECTION MOLDED POWDERED METALS/CERAMICS (PARMATECH)

- Objective - Acquire from the Parmatech Corporation patent rights and technology for a process to injection mold precision metal and ceramic parts
- Process Advantages - Improved dimensional control and uniformity of properties
- Applications
  - Textile Fibers' (jet devices)
  - Berg Electronics (tooling, connectors, and chip carriers)
  - Remington Arms (custom parts)
- Pretax Earning Potential - $5MM/year

PARMATECH PROCESS

Procedure:

- Select extremely fine powders
- Mix powder with binder
- Injection mold to desired shape (oversized)
- Extract binder (Thermal or Solvent)
- Sinter to final dimensions

Development Items:

- Binders
- Extraction Systems
- Powder Compositions and Morphologies

PARMATECH PROCESS - ORGANIZATION

Director of Research

Venture Manager

Market Development Specialist

Process Engineer - Facilities

Design Engineer - Parts and Molds

Metallurgist/Ceramist - Materials Research and Testing

Chemist/Chemical Engineer - Binders

PARMATECH PROCESS - DEVELOPMENT SCHEDULE

- Phase I (1981): Research Semiworks Facilities
  - Assignable Manpower; 2.0 Manyears
  - Development Cost; $350M
  - Capital Equipment Cost; $450M
- Phase II (1982): Production Scale Line
  - Assignable Manpower; 4.0 Manyears
  - Development Cost; $725M
  - Capital Equipment Cost; $650M
- Status : Proposal submitted to Executive Committee for approval

1982 RESEARCH PROGRAM GOALS

GENERAL OBJECTIVE

The principal objective of firearms research is to maintain and strengthen our market position through improvements to current models and the timely development of new models. During the past year Research firearms design effort was concentrated on the development of the XSG and XPG shotguns and Bolt Action Carbine centerfire rifle. In addition design support was provided to Production on the new Models 7400-7600 centerfire rifle and Model 870 Competition Trap gun. In 1982, principal Research activities will be focused on the new Bolt Action Centerfire rifle and XSG - SPG shotgun design programs.

Process Development Research will continue to receive increased attention. Considerable effort will be devoted to the new injection molded powder metal technology program.

Firearms Research

Design work continues on eight major firearms programs. These programs included the Models 7400 and 7600 Centerfire rifles, the Model Four Limited Edition, the Models XSG and XPG shotguns, the Bolt Action Carbine centerfire rifle, a new Bolt Action Rifle, the Model 870 Competition Trap gun, the Model 1100 Ducks Unlimited, and the Model 870 Ohio State Highway Patrol Commemorative shotgun.

The Models 7400 and 7600 Centerfire rifles are in production. Design support was provided to Process Engineering and Production during start-up. Two new calibers, 7mm-08 and 25-06, have been added to the line for 1983 announcement. A Carbine model is being developed. Twelve samples have been fabricated for Marketing evaluation.

A Limited Edition Model Four, commemorating the 75th anniversary of autoloading rifles, is planned for 1982 announcement. Two models have been completed for evaluation. The model drawings are complete and ready for transmittal.

Preliminary design of the XSG autoloading shotguns has been completed and work on the XPG pump version is progressing. Fourteen XSG engineering prototypes have been made. Field testing has been completed on four 3" Magnum models, with two models being endurance tested to 10,000 rounds. The results have been very encouraging. An automatic gas compensating device has been designed to control bolt velocities over a broad range of pressures. Four barrel assemblies with the new system have been fabricated and are now in test. Four new XPG's are scheduled to be finished by November 1981.

The Bolt Action Carbine centerfire rifle was redesigned to reduce weight. Models have been built and design tested. A Marketing field test is scheduled to be made in October. Announcement is planned for 1983.

Design work for a new Bolt Action Centerfire rifle is in progress. The model will have new styling and engineering features that meet with Marketing's strategy. Engineering prototypes are being fabricated for evaluation.

The Model 870 Competition Trap gun was released for shipment.

Design work for the Model 1100 Ducks Unlimited Commemorative, Special and Trade models was completed. The Commemorative and Special models have been approved and are being warehoused. The Trade model is scheduled for warehouse in December. Work is proceeding on the 1982 model guns. Engineering prototypes have been made for Marketing evaluation.

Design work for the Model 870 Ohio State Highway Patrol Commemorative was completed and released for production. The model is scheduled to be warehoused in November.

Process and Material Development

Process development work continued on the use of a programmable manipulator to polish rectangular receivers, an automated machining and material handling system for barrel blanks, and an in-house technique for producing stampings. Additionally, several new programs were initiated, including a plastic piston design for the Model 1100 Shotgun the investigation of an automated system to convert conventional machining groups into non-synchronous transfer systems, and a joint program with the Du Pont Engineering Department for an automatic stock manufacturing machine.

Research testing of the ASEA manipulator is complete for polishing Model 7400 and Model 7600 receivers. Pending a successful Production Trial & Pilot beginning in September, the ASEA will be turned over to the Plant with a projected annual savings of $60M.

The auto-drill line is now in full production, and has been turned over to the Plant. A partial closing of the project has been initiated. This action will close out the capital construction work orders, but leave the operations work orders open until items required to provide the system with full operating efficiency have been completed. Complete project close-out is anticipated for the end of the calendar year. First year saings are estimated to be 282M.

The four-slide stamping and forming machine has been delayed at the tooling vendor's to correct discrepancies in the Model 7400 magazine follower. The machine is expected to be operational in Ilion during the fourth quarter. A wire EDM machine, and a glass-bead peening machine, bought as part of the four-slide project, are now in use.

A molded plastic piston seal, and a stamped stainless steel piston have been demonstrated to be functionally acceptable for replacing the current machined steel rings on the Model 1100. The molding supplier is changing the mold design to eliminate a weak point opposite the mold gate. Endurance testing will resume as soon as new samples are received. The potential annual savings is $100M.

Conceptual designs have been completed for simple, inexpensive automation devices that can be used to convert existing machining groups into non-synchronous transfer systems. It is forecasted that widespread use of these devices could result in a $3MM annual savings. A project has been initiated to build a prototype.

The Process Research group is working with the Du Pont Engineering Department to develop an automatic stock manufacturing system, utilizing basic N/C checkering technology. The machine system is being developed in two phases beginning with automatic stock sanding procedure. The second phase will include the machining and carving operation. A prototype machine has been constructed, programming of machine is nearing completion, and development of sanding tool is progressing.

1982 FIREARMS RESEARCH PROGRAM GOALS

- Finalize the design for the new Bolt Action Centerfire rifle and in collaboration with Marketing and Production, develop an introduction plan.
- Complete development on the XSG and XPG shotguns and develop a product introduction plan.
- Finalize design of the 1982 Model Ducks Unlimited Commemorative shotgun.
- Complete development program for the Model 700 ADL/BDL bolt action rifle upgrading for 1983 announcement.

1981

Firearms Research and Development Expense

	*Estimated $M
Improvement of Established Business	
Arms Design	$ 2,095
Process & Material Research	455
Total	$ 2,550
Other Work	675
Total	$ 3,225

*8 months actual expenditure; 4 months estimated.

"CONFINE YOUR LETTER TO ONE SUBJECT ONLY"

September 3, 1982

TO: W. K. BRYANT

FROM: T. L. CAPELETTI

SUBJECT: REASSIGNMENT OF POWDER METAL RESEARCH DEPARTMENT

Effective September 1, 1982, Department 9096, Powder Metal Research, has been reassigned to the Ilion Research Division reporting to Clark Workman through the Process and Materials Research group supervision. This reassignment includes laboratory facilities and equipment in Building 72-2 and three (3) wage roll technicians as follows:

- P. B. Conant
- J. S. Martin, Jr.
- G. L. Reinhardt

Funding for the programs will continue to be provided by P/M sales. Please modify your records and reporting procedures as required to be consistent with the revised organization. If you have any questions regarding budgetary items, please contact Dick Sassone.

PROGRAM DEVELOPMENT
(New Firearms Design)
J. S. Martin

Date: June 15, 1982

XSG/XPG SHOTGUN DESIGN

Group Leader: Dave Findlay

Personnel Assigned: Jack Kast
Kevin Calkins
Tom Powers
+ Replacement for Carter (1/2)

M/7400 PROJECTS - DESIGN

- M/7400 Plant Support
- M/7400 Carbine (Shorten Barrel Only)
- M/7400 Lightweight
- M/7400 New Calibers - 7MM-08, 25-06 and 22-250
- M/Four Limited Edition Follow-up
- M/7400 Assault Rifle
- M/7400 Law Enforcement Models

No Group Leader

Personnel Assigned: Albert Eddy
Randy Murphy (1/2)

M/700 BDL PROGRAM (ANNOUNCEMENT 1985)

Project includes:

- Scope Mounts
- New Receiver Design
- New Magazine Concept (Rotary)
- New Bolt Release
- Bob Ellmann Stock
- Hammer Forge Barrel Concept
- New Fire Control (Trigger/Sear Block)
- New Extractor
- New Firing Pin

Personnel Assigned: Fred Martin
Tom Bauman
+ Replacement for Fanelli

R2542066

PROGRAM DEVELOPMENT
(New Firearms Design)

M/EIHPX NEW ELECTRIC IGNITION SHOTGUN CONCEPT

Project: New shotgun gun and ammo system to propel a shot column 80 yds. with a special guage size and electric ignition.

- Standard Size Receiver
- New Fire Control (Electronic)
- New Barrel (New Bore and Chamber)
- Complete New Styling
- Lighter Weight
- 3 Shot System (Rotary Box Concept)

Personnel Assigned: Randy Murphy
Adam Hugick

M/PARKER SHOTGUN (SIDE BY SIDE)

Project: Design and produce the original Parker shotgun.

- Redraw and bring model drawings to current manufacturing processes.
- Build two special Parker guns for Marketing to sell.
- Set up program to manufacture low volumes 10-20 per year.

Personnel Assigned: Dave Findlay
~~(New employee needed)~~
+ Replacement for Carter (1/2)

ANNOUNCEMENT

ORGANIZATION NOTICE

PERSONNEL AND EMPLOYEE RELATIONS

Effective February 1, 1983, the Personnel and Employee Relations Department will be reorganized along more functional lines, reflecting the following changes:

E. M. Marks, M.D., Director of Medical and Environmental Health will extend his present assignments to include all matters concerning Remington's various health plans.

R. J. Foley will assume the title of Consultant-Benefits and Pensioner Relations, becoming part of the Industrial Relations Section.

An updated organization chart is attached.

ORGANIZATION NOTICE

Effective February 1, 1984:

The Remington Arms Specialty Metal Products business will be merged with Vespel® and Kalrez® into a new business unit designated Engineered Parts. This business unit will encompass worldwide marketing, manufacturing and research responsibility for Vespel®, Kalrez®, powder metal and injection-molded parts, and abrasive products.

R. B. Gordon, Manager - Vespel® and Kalrez®, is appointed Manager - Engineered Parts, reporting to E. F. Barrett.

H. C. Munson is appointed Manufacturing & Research Manager - Powder Metal and Injection-Molded Parts, reporting to R. B. Gordon. Mr. Munson will be responsible for Production, Technical, and Research activity involving Powder Metal and Injection-Molded Parts, and Abrasive Products.

L. W. Baum is appointed Technical Manager, responsible for Powder Metal and Injection-Molding Research and Engineering activities, reporting to H. C. Munson.

W. W. Cook continues as Production Superintendent, Ilion Powder Metal operation, reporting to H. C. Munson.

C. J. Sampson continues as Plant Superintendent - Hazen Plant, reporting to H. C. Munson.

E. A. Golda is appointed Abrasive Products Manager, reporting to H. C. Munson.

L. E. Zeillmann is appointed Marketing Manager - Vespel®, Powder Metal and Injection-Molded Parts, reporting to R. B. Gordon.

P. H. Holmberg is appointed Product Manager - Powder Metal and Injection-Molded Parts, reporting to L. E. Zeillmann.

J. R. Merhar is appointed Development Programs Manager, reporting to P. H. Holmberg.

An abbreviated organization chart is attached.

June 4, 1984

ANNOUNCEMENT

MARKETING DEPARTMENT

ORGANIZATION CHANGES

The following organization changes will become effective July 1, 1984 in connection with the consolidation of the Remington Marketing Communications Division into Du Pont's Marketing Communications Department on that date:

J. G. Williams will retire with 25 years of service.

R. A. Baldwin, R. F. Dietz, R. C. May and G. A. Quinn will be transferred to Du Pont's Marketing Communications Department reporting to Nils Kwick, Marketing Communications Manager.

R. F. Dietz and G. A. Quinn will be located in Du Pont's Marketing Communications Department offices in the Nemours Building on July 1.

R. C. May will continue his office in Bridgeport on a temporary basis but will relocate to Wilmington at a later date.

R. A. Baldwin is currently on an extended medical leave of absence.

G. L. EHRENS
Director of Marketing

JULY 27, 1984

FINANCE DEPARTMENT
ORGANIZATION CHANGE

The following organization changes are effective August 1, 1984:

A. M. Johnson, Cost Accountant, is placed on special assignment reporting to N. S. Cosmo, Manager, Payables, Salary Services and Employee Benefits. Miss Johnson will be responsible for Payables and Salary Services and special studies in the employee benefits area. The position of Cost Accountant is discontinued.

B. E. Chernak, Supervisor of Accounts Payable, is appointed to the new position of Supervisor-Output Costs and Wage Payroll, reporting to D. E. McWhirt, Plant Accountant.

C. T. Wagner
Comptroller

JULY 27, 1984

ORGANIZATION NOTICE
F&FP DEPARTMENT

As a continuation of the consolidation of Remington's Finance Department functions begun last year, the following individuals have accepted transfers to F&FP Department - Wilmington, effective on or about September 1, 1984:

W. J. Thresher, Jr. is placed on special assignment reporting to W. C. Pickett, III, F&FP Department Accounting Manager. Mr. Thresher will lead the transition task force effecting the integration of the financial statements/accounting function to Wilmington. In anticipation of the transfer, Mr. Pickett will assume functional responsibility for financial statements, effective immediately.

W. R. Sundstrom is appointed Accounting Supervisor, F&FP Business Services Division, reporting to W. J. Thresher, Jr.

P. T. Cipolla, J. M. Hoehn and D. A. Lasko are appointed to accounting positions in F&FP Business Services Division, reporting to W. R. Sundstrom.

Nils Bengston is appointed Business Specialist, F&FP Business Services Division, reporting administratively to W. S. Culliton, F&FP Financial Services Manager, but taking functional guidance from T. J. Faughnan.

To facilitate an orderly transition of the forecasting and business analysis functions:

T. J. Faughnan, currently Manager of Tax and Financial Services, will remain in Bridgeport on special assignment until financial services are fully integrated into Wilmington, but will take functional guidance from W. S. Culliton effective immediately.

K. J. Samonek, Manager, Financial Accounting and Statements is appointed Manager, Financial Services (Remington), reporting to T. J. Faughnan.

TO ALL BRIDGEPORT PLANT AND A.O. SUPERVISION

The attached statement is being read to the union at 1:00 p.m. The statement should be read to nonexempt employees after 2:00 p.m. Questions and Answers are also attached for use with nonexempt employees.

R. ANDERSON
G. PEACOCK

STATEMENT TO EMPLOYEES
FINANCE DEPARTMENT CONSOLIDATION

As previously announced, plans are being made to consolidate management and certain business support functions of Remington with those of Du Pont. As part of that consolidation, it is currently expected that portions of Remington's Finance Department corporate accounting organization will be moved to Wilmington by the end of this summer. Certain functions of the Accounts Payable, Salary Services and Corporate Information Systems units are expected to be moved at a later date. There are no plans to move any Plant Accounting sections. We are in the process of developing detailed plans and timetables for the Finance Department move. As these plans become firm, they will be communicated to all employees involved.

All benefits applicable to excess nonexempt employees will be available and every effort will be made to treat such employees fairly, including a review of job rights at the Bridgeport site, assisting in outplacement, or providing priority consideration for employment at other Remington sites, as new jobs become available. Remington management will work with other sites to support the job search activity wherever possible.

C. T. Wagner

C. T. WAGNER
COMPTROLLER

QUESTIONS AND ANSWERS FOR NONEXEMPT EMPLOYEES

Q1 What is the total number of nonexempt employees who will be made excess by the move expected this summer.

A1 The total should be less that 10 employees.

Q2 Will any nonexempt employees be offered the opportunity to move to Wilmington?

A2 There are no such plans. However, any nonexempt employee may apply for employment at any Company location which is accepting applications.

Q3 If nonexempt employees are offered jobs at other locations, will the Company cover their move under the Employee Relocation Policy?

A3 There are no such plans.

Q4 If an affected nonexempt employee gets a job between now and when excessed, will he/she be eligible for severance pay if he/she leaves to take that job?

A4 No. When specific excesses are announced, applicable benefits will become available.

Q5 Will Voluntary Termination Incentive be used in conjunction with this move?

A5 All possible options are being considered for nonexempt employees.

Q6 What is meant by priority consideration for employment at other Remington sites for nonexempt employees.

A6 Excess nonexempt employees applying for jobs at other Remington locations will be given preferential consideration for job openings over new hires at those locations.

Q7 Does this priority consideration include Du Pont sites?

A7 No. However, any nonexempt employee may apply for employment at any Company location which is accepting applications.

ANNOUNCEMENT

PRODUCTION DEPARTMENT

ORGANIZATION NOTICE

Effective December 1, 1984 R. A. Blackhall will transfer to the Materials and Logistics Department, Wilmington and is appointed Senior Purchasing Agent, Chemicals, Energy and Electronic Materials Division.

Subsequently, all plant purchasing personnel will report to their respective plant managements. The Lake City Purchasing Department will no longer have an indirect reporting responsibility to R. A. Blackhall. Lake City purchasing actions exceeding plant authority will be transmitted to the appropriate point in the M&L Department. R. A. Blackhall will continue to coordinate the consolidation of Remington's commercial purchasing responsibilities into Du Pont M&L. In his new assignment, he will be responsible for procurement of all essential materials for the Remington commercial plants. Ilion and Lonoke Purchasing Departments, until further consolidated, will submit orders exceeding site authority to Delaware Valley Region Office (DVRO) and Tennessee Region Office (TRO), respectively for execution.

E. HOOTON, JR.
VICE PRESIDENT & DIRECTOR OF PRODUCTION

CONSOL Consolidation Coal Company

Organization Bulletin

Pittsburgh, Pennsylvania
April 14, 1989

EFFECTIVE DATE: APRIL 14, 1989

In order to better position Sporting Goods and Remington to accomplish the goals set before us, the following organizational changes have been made:

John E. Preiser, Director of Sporting Goods, will become Director, Marketing and Sales, with responsibility for Firearms, Ammunition, Accessories, and Fishing, including International Sales. He will maintain responsibility for Remington Farms and Tecnos. Mr. Preiser will be headquartered in Wilmington, Delaware and will remain as Executive Vice President of Remington Arms Company, Inc., for external purposes.

John M. Yonosko, Controller, Mid-Continent Region, Consolidation Coal Company, will be transferred and promoted to Manager, Administration and Services, with responsibility for Accounting, Supply and Distribution, Consumer and Technical Services, Environmental Affairs, Purchasing, and S & K Wood Products. Wilmington will continue to provide various functional support services. Mr. Yonosko will be headquartered in Pittsburgh, Pennsylvania.

Paul E. Otto, Plant Manager, Bridgeport and Lonoke, will become Plant Manager, Ammunition, with responsibility for the entire facilities at Bridgeport and Lonoke. He will also have responsibility for the Ada, Ohio, and Findlay, Oklahoma, target plants. Mr. Otto will be headquartered in Lonoke, Arkansas.

John F. Winske, Plant Manager, Ilion, will become Plant Manager, Firearms, with responsibility for the entire facility at Ilion, including Operations, Control, and Engineered Parts. Mr. Winske will continue to be headquartered in Ilion, New York.

William H. Coleman, Technical Manager, Ilion, will become Manager, Technical Services. Mr. Coleman will continue to be headquartered in Ilion, New York.

Messrs. Preiser, Yonosko, Otto, Winske, and Coleman will report to the undersigned.

An organization chart is attached.
