

## Test Lab Request Form Instructions

- The TLW request form can be found on the second worksheet (tabs at bottom of the screen) of this file.
- Please fill in all required fields as noted in red. Please fill in all other fields if applicable / possible. Instructions for each field will appear when you click on the field. The procedure field is an embedded MS Word object which will allow you to use formatting features not possible in Excel (i.e. paragraphs, bullets, numbering, etc).
- If possible, create your desired data table and/or graph formats in the additional worksheets of this file. This is preferred over extensive written procedures.
- If the request is for High Speed Video, specify any desired parameters (i.e. frame rate, resolution, etc.) in the "HSV Setup" tab. If not specified, the videographer will document the parameters that they chose to use.
- Once the form is completed, save this file on your personal computer using the following format:  
*TLW#### - Brief Description*  
 Try to keep the description as concise as possible. Your name in the filename is no longer necessary.
- Email the file to Phillip Reesor (primary) and Mark Hammond (secondary). Phillip will return your email with the assigned number and the assignee

Test Lab Work Request Form

Engineer: Vince Norton

Project #: 241493

Date Submitted: 12/10/2008

Test Description:

Assemble new receiver insert assemblies in a Model 770 action and measure safety on/off forces

Test Procedure:

- 1. Continue test from TLW-2645. Use the same numbered receiver i assemblies for this test.
  - 2. Assemble a receiver insert assembly into a Model 770 action.
  - 3. With the bolt closed measure safety on and off forces. Take 3 measurements and record each one.
  - 4. Cycle the safety on and off 50 times and then record forces again.
  - 5. Cycle the safety on and off 50 more times and then record forces a
  - 6. Reverse the orientation of the safety pivot pin and insert it from th side
  - 7. Record safety on off forces with the pivot pin in this orientation. Take 3 measurements of each one.
  - 8. Repeat this on 6 assemblies.
  - 9. Take one of these receiver inserts and run it up to 3000 cycles on t cycle fixture.
  - 10. Measure the safety on/off forces after every 500 cycles.
  - 11. Measure sear lift after 3000 cycles.
- \*\*The following steps are to be performed on a current receiver insert ass
- 12. Assemble a current receiver insert assembly into a Model 770 acti
  - 13. With the bolt closed measure safety on and off forces. Take 3 measurements and record each one.
  - 14. Cycle the safety on and off 50 times and then record forces again.
  - 15. Cycle the safety on and off 50 more times and then record forces a
  - 16. Repeat this on 5 assemblies.
  - 17. Take one of the new trigger block receiver inserts
