Gerald,
Attached is a model and detail drawing for the X-Mark Pro safety arm with integrated safety button.

Vince,
Can we have this drawing reflect an alternative configuration that details a thumb button similar to our current design. This would eliminate the need to braze.

Will,
I am not sure if we have already discussed this or not. If we have and it is not a viable option, please ignore this message. I am just trying to tie up some loose ends so we can begin the CAR approval process.

Thanks,
Gerald

Danny,
The current safety arm is one-piece (300408), The drawing for the propose (300674) doesn't include the button (see dwg. 305580)
Gerald
