

1. Measure safety on and off forces on 8 Model 770 fire controls with the new trigger block safety. Take 3 readings of safety on forces and 3 readings of safety off forces and average each one.
2. Replace the safety detent spring with one made from .038" wire and repeat the measurements done in step 1.
3. Replace the safety detent spring with one made from .035" wire and repeat the measurements done in step 1.
