**Attachments:** Competitive trigger pull data 12-18-2007.xls; TLW2358 data final.xls

Gentlemen:

Please find attached excel files of the recent competitive trigger pull study and the M/700 XMP audit performed earlier this year.

The competitive trigger data was collected by:

1. Measured out of box trigger pulls with the Chatillion spring scale followed by the Dvorak (Jim Ronkainen)
2. Trigger pulls were adjusted per the respective user manuals to obtain low then high trigger pulls (Steve Wade)
3. Trigger pulls were reset to original values then 1 proof load and 5 service loads were fired through each gun. (Steve Wade)
4. Trigger pulls remeasured. (Steve Wade)

\*note: The TC Icon was not headspaced or shot as we do not currently have any 30 TC gauges or ammunition.

Any questions please contact me.

Thanks,  
DDD
