Subject: 710 WITH SPL FIRECONTROL
Attachments: EXP9901 Stock For SPL.pdf; image001.gif

Incorporation of the SPL in the model 710 also requires a stock modification. This can be done with a modification to the tool or by machining the current stock. It is a material safe (remove material) condition if it is machined. It is not material safe to modify the mold. This needs to be addressed soon because I believe it will involve a tool modification and could impact your build schedule. Drawing is attached showing modified areas.
