We're planning to get the fixture out next week. The new fixture, and sequence-of-operations change, will improve the quality of the fire control. We tested (60) fire controls to this new process without any problems setting the trigger pull. All else equal, we should see an improvement on the line.

Jim

Jim –

You want the fixture that drills and tap the housing, correct?

Scott –

We need to make sure you are pushing the Drilling and Tapping of X-Mark Pro Housings (F306380) because Jim needs to send the fixture out for re-work. Put them on 10 hours (Jessica, Marty Seaman, etc.). The fixture will most likely ship out for re-work towards the end of next week. There are 5K+ at this operation. When the fixture is out they can build them on the press for plate. We shouldn't have anyone building (unless you have 2 people on the job) until the fixture is shipped.

Thanks,

Kyle
