

MODEL 760

244 Remington

The Sales Department requests consideration of introducing the 244 Remington in the Model 760, with a forecast of new business amounting to 3,000 rifles in the first year and 2,000 per year thereafter. Research and Development believes this may be technically feasible, and they will investigate. As soon as Research and Development can provide necessary information to the Plant, they will estimate the cost of this introduction and N. F. Larsen will prepare an economic study.

308 Winchester

The design work has been completed, and the previous Development Schedule showed that this model could be introduced seven months after authorization. The Sales Department now believes this introduction should be made, so the economics will be reviewed and schedules for introduction prepared.

RIM FIRE RIFLES

MODEL 513-S

Discontinuance of the Model 513-S has been approved by Management. At the request of the Plant, the committee approved the following decision:

Decision:

The Operations Committee (Arms Division) recommends to Management that the Ilion Plant be authorized to provide a ten-year supply of spare barrels, receivers, and stocks for the Model 513-S, and a 15-year supply of other parts, and that they be authorized to dispose of any items of equipment or tooling for the Model 513-S when the necessary parts have been produced.

MODEL 524

The sample gun furnished to Sales on January 5, 1956, is now undergoing field test. The results thus far have been encouraging, but are not complete. The Plant reported that if they were released immediately on this they could have it ready for introduction in September, 1956. It would be advantageous to them to
