

The Committee approves the mechanism function, and general appearance of the Model 58 -5-Shot, with the understanding that unsettled design details will be submitted to the Committee before the item is finally approved.

SINGLE BARREL BREAK ACTION SHOTGUN, BREAK ACTION OVER AND UNDER, AND SHOTGUN-RIFLE COMBINATION

It was agreed that each of these items will be separately listed in future agenda, to facilitate reporting.

SINGLE BARREL BREAK ACTION SHOTGUN

The Sales Department has proposed this item, on the basis of models in 12, 16, 20 and 410 Gauges. Total forecast volume for all Gauges is 30,000 guns yearly.

The Production Department reports that potential production sources for this item include the Ilion Plant, Companhia Brasileira de Cartuchos, and Hispano Suiza. Item costs from each of the stated sources are being compiled, but are not yet ready for proposal to the Committee.

BREAK ACTION OVER AND UNDER - SHOTGUN-RIFLE COMBINATION

A Sales Department forecast of 12,000 units annually has been made for an over-and-under comprising 22 Long Rifle and 410 Gauge barrels.

The Production Department reports that the current ambitious schedule at Ilion has precluded immediate costing of this item. Possible procurement of this item from outside sources is being explored. It is questionable whether high priority can be given for this item, in view of the low forecast quantity and indicated high tooling costs.

CENTER FIRE RIFLES

MODEL 742 CARBINE - CALIBER 280 REMINGTON

The Production Department reports excellent results from performance testing of Carbines in Caliber 280 Remington.

The Production Department expects to warehouse 500 of this item in July, as scheduled.

The item will be dropped from the agenda.
