

RIM FIRE RIFLES

The postponing of the introduction of a Bolt Action Rim Fire rifle until January 1967 raised the question of what Remington will have to offer as "new" for 1966.

In the discussion, a review was made of the past programs to "dress up" the Bolt Action guns and the change from a wood to nylon Stock and re-introduction of wood.

The Rim Fire Committee had completed the study and had recommended that R & D undertake a redesign of the Rim Fire line starting with the Bolt Action guns.

Committee Action

The Rim Fire Committee is to be reactivated to study changes which will provide customer benefits with the objective of increased sales. The study is to be confined to the Models 550, 552, 572 and Nylon 66. This program is to be added to the Operations Committee listing for the 1966 gun line.

RIM FIRE - CENTER FIRE - SHOTGUN -  
AUTOLADING AND SLIDE ACTION

No action was reported as R & D personnel is fully assigned to other programs.

The next meeting will be September 1 in Ilion.
