

SHOTGUNS - contd.MODEL 870, 28-410 GAUGEMODEL 1100, 20-28-410 GAUGE - contd.

will correct the problem. There is a possibility that a hardened insert in the top of the Receiver may be required. The design changes required should be determined in April.

Production reported production to warehouse as follows:

Model 870	28 Gauge	371
Model 870	410 Gauge	616
Model 1100	28 Gauge	257
Model 1100	410 Gauge	150

The assembly of Model 1100 2½" chamber skeet guns should start April 8. R & D will select ten (10) for confirmation testing.

By the end of April, the only remaining components requiring Model Shop assistance in converting should be the 28 and 410 gauge Carrier. Vendor blanks to the latest revision will not be received until the end of May. The Model Shop has been able to supply 28 and 410 gauge Carriers with the lance which provides a retainer for the Carrier Latch to meet all production requirements.

Production reported that twenty (20) Model 870 Matched Pairs have been produced to date. Marketing will control the invoice shipment of Matched Pairs. Special orders should be completed before shipments are made to customers. A production case with Matched Pair Model 870, 28 and 410 gauge guns was shown to the Committee.

The Operations Committee was requested to approve invoice shipment of the Model 1100, 410 gauge 3" chamber field gun. Approval to ship the Model 1100, 410 gauge 2½" chamber skeet gun when R & D confirmation tests have been satisfactorily completed was also requested.
