

RIM FIRE RIFLES - contd.MOHAWK 550 AUTOLOADING RIM FIRE RIFLE - contd.

At the present time, there is a space problem at Ilion. It could be that the dropping of these two rifles would provide a temporary solution. Also, possibly rearrangement costs could be reduced under this program.

It would be necessary to provide spare parts for seven (7) years for both rifles.

Committee Action:

Production is to present for Committee consideration at the May meeting the following:

1. Effect on operative earnings by dropping the Model 550 and 514 rifles.
2. The effect on investment.
3. Space that would be available through the removal of machines used for the production of Model 550 and 514 rifles.
4. Indicated savings in rearrangement and/or additional construction costs if the indicated space became available.

Marketing is also to review Remington's position if the Models 550 and 514 were to be dropped from the line.

FIREARMS TESTING

Production reported that equipment to bore clean Model 870 shotguns after gallery test is being designed. This equipment has to be fabricated and the assembly area layout completed. Proof-test Model 870 assembled shotguns should be effected the latter part of 1970.
