

MODEL 1100 - MODEL 870 - NEW GENERATION
FOR ANNOUNCEMENT IN 1978 & 1979

INTRODUCTION

The new generation program for the M/1100 and M/870 will feature changes in styling and engineering which result in significant improvement of these models. We propose that the new generation M/1100 be announced in 1978, and followed one year later, in 1979, by the new generation M/870.

FIRST CHART

This first chart shows the styling changes for the New Generation M/1100:

1. The Model 1100 Field Grade will have redesigned pressed checkering patterns for both stock and fore end.
2. The fore end will be restyled to enhance the gun appearance.
3. New roll markings on the receiver panels will further accent the New Generation M/1100 appearance.
4. A machined magazine cap will both reduce cost and prevent the coloring and bleedout problems of the present powder metal cap.
5. Stock dimensions will remain the same, with styling changes for the grip cap, butt plate and spacers.

The Skeet and Trap versions of M/1100 will be quite different from the Field grade. They will feature:

1. Cut checkering on the stock and fore end.
2. Receiver markings will be engraved by the photo-etch process, for a higher quality appearance than field grade guns.
