

The number of jobbers receiving shipments during late September and October is 178. The size of the shipments varied from 50 to 100,000 rounds.

The Committee reviewed the powder handling procedures used by the Bridgeport Plant. The Product Engineering and Control Section again will review all procedures with the powder handling personnel to insure compliance.

The Committee directed that the list of distributors be examined and those with significant shipment, determined statistically and by dates of shipment, be contacted by our field representatives. The field representatives would check the distributor's warehouse and then his pertinent records, to attempt to locate the dealers who might have received ammunition from Code X25D. 83
