

3. A sample of the ammunition will be sent to Du Pont for examination. They will be asked to verify whether 4198 powder is the contaminant.
4. Field & Consumer Services (Earl Larson) will check with the Ilion Plant to get a detailed report on the examination of the Model 700 gun.
5. Ammunition Research (W. D. Nickel) will check a larger sample size of ammunition to determine the round-to-round variability of the mix.
