

FEBRUARY 3, 1981

T. W. Rawson will determine what powder was used in the ammunition involved in the complaint and whether there is any evidence of mixed powder.

21MM Seismic

It was reported that users have found bulged or split barrels on three occasions when firing our 21MM Seismic ammunition. Ammunition is being called back from Tennessee for replacement for this reason. The ammunition will then be examined to determine whether further action is required.
