

EXHIBIT "C"

FIREARMS SAFETY
DEPENDS
ON YOU

(Illustration)

The people who
designed your firearms
knew what they were
doing. Don't try to alter
or modify them.

The modern firearm is the end result of countless hours spent in design and testing. The action of each part--and its interaction with the other parts--is carefully related to the final form and function.

But there seem to be a few firearms owners who think they know more than the accumulated technical knowledge poured into the design of each gun. These are the people who insist on modifying, altering and revising the basic firearm to meet their own ideas.

All too often the result is not an "improved" firearm but an unsafe one. Far too many firearms accidents result from unauthorized modification of a firearm that strips it of the built-in safety margins put there by the factory engineers and designers.

MAKE NO
MISTAKE ABOUT IT!
