Dear Sir:

I have a Remington
rifle 30.06 sprg. Model 700-BDL

I have a very dangerous
situation with this rifle.

when I load up, push in
the bolt & pull down the
bolt handle it goes off.

when I push the bolt all
the way in nothing happens,
when I pull the bolt handle
down, it goes off, but not
all the time - ?

Is it the fault of the bolt
or rifle itself?

Please help.

Thank you.

Bob Hantula
