

-2-

By copy of this letter, we are advising Mr. Collins of the disposition along with a strong recommendation that he not lubricate the trigger assembly as that assembly was designed not to require any lubrication. If Mr. Collins still feels the need to lubricate the assembly, he should use a small amount of powdered graphite only.

We trust this action meets with Mr. Collins approval, and thank you for giving us this opportunity to be of service.

Sincerely,

R.H. Potter
