

To Whom this may concern

( My Son and I recently experienced what could have been a Very Fatal accident. We were Deer Hunting here in PA. I put my son on his stand, he loaded his Rifle, I loaded mine and upon closing the "Bolt" the Rifle "Went off" on me. Fortunately the Rifle was pointed down and away from him. I would hate to dwell on what could have happened, but I can't get it out of my mind. This has me very concerned and upset. I have had the Rifle to a Gun Smith where I had the trigger and bolt cleaned. The bad and unsafe feature on this Rifle is the "Safe" has to be in the "fire" position to open and close the bolt. I'm not sure what can be done about this matter, but would like a reply from Remington first.

Rifle-Rem 700 BDL  
7mm Mag.

Thanks
