F. E. MORGAN

A Model 600 in the 6.5MM Remington Magnum caliber Carbine is being shipped to you for field test and evaluation. 80 rounds of ammunition in ¹²⁰grain will also be shipped with the gun.

These carbines are factory produced and tested, and are similar in every respect to the 350 Magnum carbine with exception of the caliber. The 6.5MM Magnum will provide long range shooting equipment for the enthusiast who is interested in that combination for big game; provides a high velocity, flat shooting, accurate carbine.

The 120 grain pointed corelokt bullet used in this combination has already been tested and found to be very effective on mule deer, antelope and elk, and of course, it is an excellent combination for long range shooting of smaller game such as coyotes, foxes, badgers, and on varmints such as crows, chucks, etc.

The ballistics of this combination have not been officially released, but they will be reviewed with you at our sales meetings. The ballistics of the 6.5 Mag. are comparable to that of a 270 Win. and although Remington is only furnishing this caliber with 120 grain bullet, the handloader will find an unusually good spread of bullet weights from the custom bullet shops.

You might ask why replace the 270 with a 6.5 Magnum. The 270 is a longer cartridge and requires a longer receiver, therefore resulting in a heavier, more cumbersome type of rifle. To keep our concept of magnum carbine in its own category it was necessary to develop this efficient, high velocity cartridge to fit the carbine itself.

The following is a review of the designer's specifications submitted to you last year on the 350 Magnum Carbine. All items listed apply to the new combination.

For:

November 1, 1955

1. The new barrel is heavier weighted and more heavy set rigidly, although still carrying the same general barrel contour as the standard 600 models. The barrel is free floating and equipped with standard heavy open sights.
 2. The action stock is of walnut and beech wood, laminated for greater strength and waterproofed to prevent warpage. With custom checkering and the new smooth bore muzzle finish applied, this gun gives a pleasing overall two-color effect.
 3. The action is the same weight and general characteristics as the present standard 600 action. However, it is spring bedded into the stock for maximum accuracy. This insures return of the barrel to the same bedding position after each shot.
 4. The sight line carries the same general characteristics with the new shooting Dalton Vernier-type sight. This type of material is impervious to weather, varying, etc.
 5. Telescope mounting - The W/600 action model will introduce for the first time a remote barrel bracket. This elevated projection located between the joining point of the receiver and barrel serves as a recoil support for mounting of a telescope base. Or in other words, when shooting heavy caliber cartridges this new barrel bracket provides a 'back-up support' for the telescope. This will insure positive firm positioning of telescope when shooting.
- Further mounting features include for the first time a remote mounting bracket (removable rear sight) for telescope bases. With this forward mounting of telescope, offhand shooting is unobstructed from loading to ejection of cartridge. Long eye relief effect is thus obtained which gives much clearer picture in big game hunting, particularly in the game is in movement.
- A standard short eye relief mounting may also be made if desired.
3. Recoil pad - A black recoil pad with three grooves is fitted to the butt of the stock, which serves recoil for all types of shooting.

TO:

December 1, 1965

7. All MAGNUM models will be fitted with a 7/8" quick detachable leather carrying strap as standard equipment.

Please test this new Model 600 Magnum Carbine for function, feeding, extraction, ejection, trigger pull, etc., for accuracy at 100 yards both offhand and bench if possible, and evaluate carrying qualities.

If any malfunction occurs, please return related ammunition, either fired or unfired, to Harvey Toolman at Ilion.

Please complete the test at the very earliest date - return in 2 weeks' time if possible. Insure Carbine for \$500.00 upon return.

Your report should be directed to F. J. Moran with copy to Harvey Toolman at Ilion. Additional distribution will be made to interested parties.
