M/700 Product Line Revisions  
For 1978 Introduction - Economics

Marketing has indicated that the M/700 Classic Stock Finish originally submitted for approval is unacceptable. Process Engineering has developed a revised long stock finishing process to provide a more acceptable finish. This new process represents a significant additional cost equivalent to \$2.08 per unit on a full cost basis.

In view of this development, the original economics have been revised to reflect this additional cost.

Please see the attached original economics, sub-divisions #3 and #5, and the revised economics, sub-divisions #3 and #5, reflecting the additional costs.
