

OPERATIONS COMMITTEE

Write Up - March 17, 1976

Do you want the trap guns?

Agree that three position safety is desirable and have done preliminary investigation.

MODEL 700, 8mm REM. MAG.

One M/700 has been completed and as soon as ammunition is available, testing will start. The one sample is being followed by five more guns which should be completed next week. These guns will be tested for accuracy, barrel bracket strength, feeding, magazine capacity, and possible feeding problems.

Four pressure barrels have been completed and are being shipped to Lonoke and Bridgeport.
