E. G. LARSON

7mm BENCH REST

It is our understanding that Remington proposes to introduce an XP100 chambered for the 7mm Bench Rest Cartridge developed at Ilion. Also, I understand Remington will provide 308 cartridge cases with a small primer hole but not factory loaded ammunition.

We also understand that no load specification will be provided with the guns. We are concerned that Remington will be distributing a gun for which there is no factory loaded ammunition, no SAAMI specification, and no loading limits provided by Remington. Unless my information is incorrect, you may wish to consider giving the consumer at least limits on powder specifications for the proposed bullet weights.

From an interest point of view only, we would appreciate hearing the outcome of this.

  
R. B. Hartman, Manager  
Shotshell Process Development
