

Synthetic 40x's are aluminum bedded.

A big thick fore end is referred to as a beaver tail fore end.

Swivel Studs: We make the swivel studs for our synthetic stock. If someone needs a swivels stud for a stock that was made by HS Precision, they need to contact HS.

Butt Plates & Recoil Pads: All must be sanded to fit. Recoil pads are flat, butt plates are concave. In order to interchange, the stock has to be altered. If there are 4 screws in the butt plate and the consumer wants another one like it they can contact an obsolete parts dealer, the new butt plates will work on the old models. Sendero and Varmint butt plates are glued on.

Sights: The front sight including screws has 4 pieces; base, front sight, & 2 screws. The front sight is dovetailed in. This must be tapped out to the side to remove. Sometimes it will have a 5th piece, which is the hood. The back sight has 5 pieces; base, slide, aperture, & 2 screws (windage and elevation). We do not sell stainless sights. On the parts list if says bright besides the sight listing it is unfinished. The sight would have to be brazed on and then finished (the brazing process can hurt the finish on the sight).
