Dear Tim, The safety modification being offered on pre 1982 Model 700 rifles needs to be completed by an authorized Remington repair center or by our factory. While we do not offer a kit to complete the safety modification on the Model 700, we have included a link below that list the repair centers in your area that will be glad to assist you (the center in Austin, Texas is exempt from this program). Please click on to the link below for information on a center nearest you:
