Dear Mr. Dix,

Thank you for your inquiry. Your Model 700 was produced in 1988 and would not have had a bolt lock installed. The bolt lock was on pre-1982 models. You should be able to open your bolt with the safety still engaged.

My M700 #C6292273 has a problem in that the bolt can be raised on safe. As I recall, the bolt would lock in the safe position. According to the original manual it should lock. I know that my new m700 has a bolt that will not lock at any time. Should I get it fixed or is it a problem that is no threat. I am the original owner, and this gun has not been altered in any way. thanks
