

bore varmint cartridges. From a “controlled round feed” perspective, Winchester offers a Safari Grade rifle chambered for dangerous game calibers.

Remington

Remington offers perhaps the broadest array of specialized centerfire bolt-action rifles. The **Model 700 Long Range** series features a wide offering of heavy barreled varmint rifles with high grade laminate and composite stocks. The **Model 700 VS (Varmint Synthetic)** features a heavy target barrel with matte blue finish, bedded in a high grade H.S. Precision composite stock with aluminum bedding block. Three left-hand skus are available in this platform. Offered in the same stock is the **Model 700 VSSF (Varmint Synthetic Stainless Fluted)** featuring a stainless steel heavy barrel with fluting. All varmint configurations are offered in popular short action varmint calibers.

The **Model 700 Sendero** series (available in blued or stainless fluted versions) are essentially the same platforms as the Model 700 Varmint rifles, only chambered for long action and magnum calibers.

The ultimate in light weight hunting rifles, the **Model 700 Titanium** was introduced to the line in 2001. Featuring a receiver of light weight titanium alloy and a fluted bolt for additional weight reduction, the Model 700 Titanium with its specially designed composite stock and mountain rifle contoured barrel is truly the lightest production rifle available today.
