Model 700 Titanium Magnum – A logical expansion of the new Remington SA Ultra Mag cartridges is to extend them into chamberings in the Model 700 Titanium. This strategy provides the hunter with magnum performance in the ultimate light carry rifle platform. The challenge to date is a means to deliver magnum performance in the Model 700 Titanium without creating a weight penalty by adding a heavy mountain contour barrel. The Model 700 Titanium as currently configured utilizes a slim, mountain contour stainless steel barrel. The present design is not suited to withstand the pressures created by a magnum round. Work is currently underway to qualify a new high strength stainless steel alloy that will safely handle magnum pressures while maintaining the slim, mountain contour barrel profile. This level of performance is currently unavailable in a production grade rifle and will provide competitive advantage in the market.
