Golden Saber HPJ (High-Performance Jacket) and HPJ Bonded Handgun Duty Ammunition
Three Unique Design Features produce remarkable performance in reliability, exceptional accuracy, rapid expansion, deep penetration, and maximum weight retention

1st: Jacket Nose “Folded Spiral Pattern” cuts right through and pierces hollow-point’s lead cavity
 * **Causes Rapid Hollow-Point Opening** on contact
 * **Required Less Energy to Initiate Opening**
 * **Develops Rapid/Controlled Expansion** for deep penetration

2nd: Brass “High Performance Jacket” made of thicker and stiffer cartridge brass
 * **Jacket Opens to Over 1.6X Caliber Diameter** creating six strong shoulders locked in place
 * **Opened Petals Stabilize Mushrooming Core** to a controlled diameter for deep penetration while maintaining virtually 100% bullet weight
 * **Jacket Develops and Controls Expansion** for large crush and stretch cavities that promote rapid incapacitation

3rd: Unique Driving Band engages rifling at bullet’s rear, behind it’s smaller diameter front
 * **Precise Bore Alignment** from reduced front diameter provides true, match-grade accuracy
 * **Reduces Overall Rifling Contact Friction** to conserve muzzle velocity
 * **Locks Lead Core to Jacket** when rifling engaged to prevent separation and retain bullet weight

Golden Saber HPJ Bonded
 * **Lead Core Hot-Bonded to Brass Jacket** for non-separation and exceptional weight retention – up to 97% through auto glass
 * **Unequaled Barrier Performance** with excellent expansion, penetration, and terminal performance
