

Just return, postage paid, any remaining line (used or unused) along with the spool, a copy of your dated sales receipt, and a brief explanation with return address to:

**Stren Fishing Lines**  
ATTN: Consumer Services  
870 Remington Drive  
PO Box 700

**1100 2 3/4 vs 3"**

Thank you for visiting Remington Country and your continued use of our Remington products. The barrel that is used on the Model 1100 is what determines the size shell that it will cycle. If your barrel is marked 3" only, then it will only eject 3" shells. The Model 1100 was never set up to cycle both size shells.

**1100 2 3/4" won't cycle light loads**

Thank you for visiting Remington Country and your continued use of our Remington products. The barrel that is used on the Model 1100 is what determines the size shell that it will cycle. If you have an 1100 field 2 3/4" barrel, it was designed to handle 3 1/4 drams of powder 1 1/8 oz of shot up to 2 3/4" magnum loaded shells. There is not a conversion that will allow it to cycle lighter loads.

**Break-in Procedure**

Thank you for contacting Remington Country. Remington does not have a standard break-in procedure. A guideline would be to swab the bore between each shot for the first 20 shots and then every 3-5 for the next 20-40.

**The chainsaws**

Thank you for contacting Remington Arms, Inc. We do not offer industrial tools at this time. Following is the manufacturer's information for parts and service for Remington Industrial tools.

Desa International  
2701 Industrial Dr  
Bowling Green, KY 42101  
270-781-9600  
[www.desa.com](http://www.desa.com)

For any parts and service on Remington firearms or related products, please contact us again or call 800-243-9700.

**Craig Colabaugh**
