**Subject:** BATFE 38 Spl +P "Contract"

I have re-read the information provided by corporate and offer the following:

1. The original solicitation required 1,000 rounds per case, BUT Greg specified in the bid response that our pack would be 500 per case.
2. There are NO ballistic performance specifications, per se, other than a statement that the alternate product "be equivalent to" the Federal Nyclad product.
3. The amendment which allowed substitution specified that the alternate round provide protection against lead fouling and generation of airborne lead from the bullet heel.
4. Greg did supply copies of the catalog pages depicting the bullet design and the catalog ballistics of 890 fps from a 4" vented test barrel and associated calculations and down-range ballistics.

There is no other defining information in the package.
